

Better Chemistry. Better Business.

Commodity Trends:

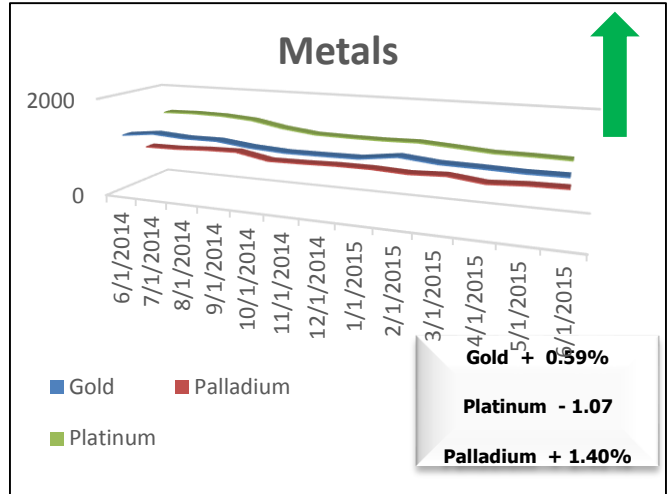

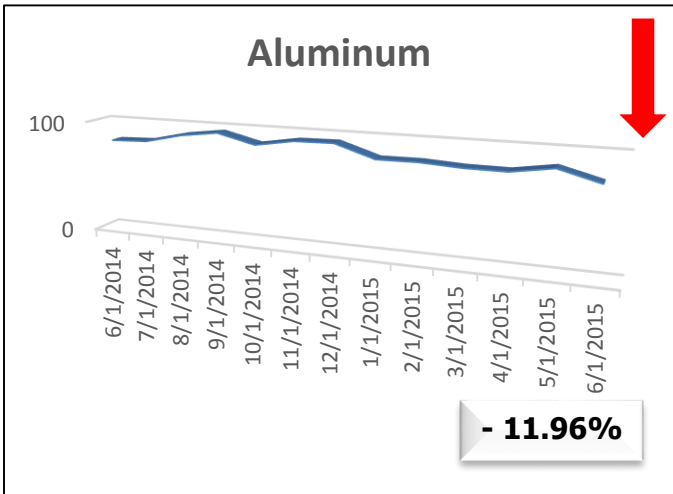

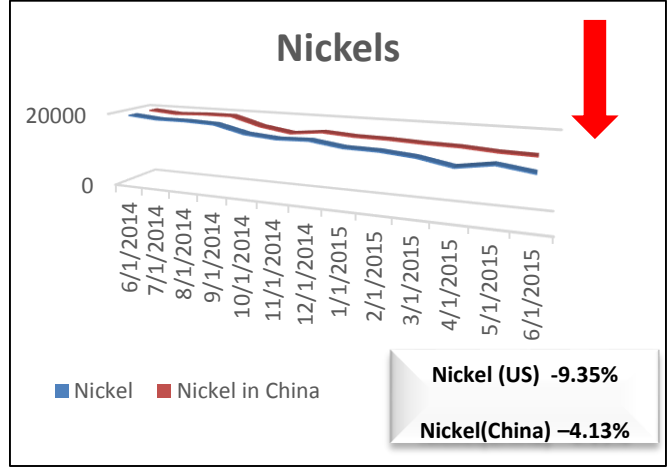

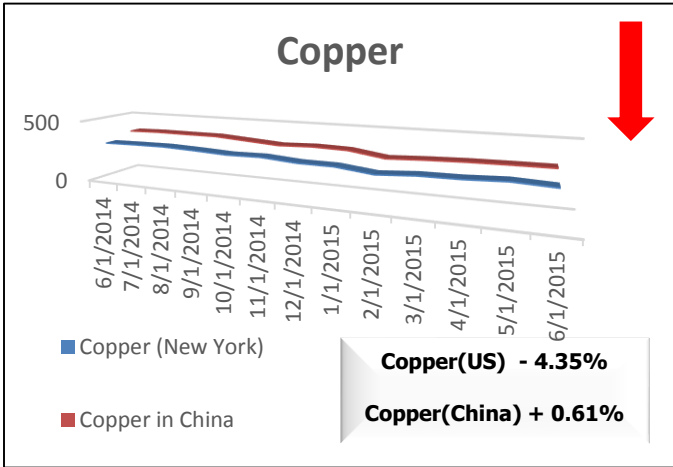

- The U.S. Bureau of Labor Statistics reported that total nonfarm payroll employment increased by 280,000 jobs in May. Economists were forecasting an addition of 225,000 jobs. The unemployment rate, which is drawn from a different survey, came in at 5.5% up slightly from 5.4% in April.
 - The Commerce Department announced that retail sales rose 1.2% in May, 1% excluding auto sales. This is another report that supports the idea that economic weakness in the first quarter was not much more than a blip driven by the weather, problems at West Coast ports, and the strong dollar.
 - The Institute for Supply Management said that the May PMI registered 52.8 percent, an increase of 1.3 percentage points over the April reading of 51.5 percent, indicating growth in manufacturing for the 29th consecutive month. A reading above 50 percent indicates that the manufacturing economy is generally expanding; below 50 percent indicates that it is generally contracting.
 - Autodata Corp. reported that May’s seasonally adjusted annual sales rate, or SAAR, was 17.8 million vehicles, the highest recorded since July 2005.
 - The National Association of Home Builders/Wells Fargo builder sentiment index released Monday climbed to 59 this month, up five points from 54 the May reading. Readings above 50 indicate more builders view sales conditions as good rather than poor. The latest reading is up 10 points from a year ago and is at the highest level since September.
- The graphs below represent a one year price trend for comparison only and do not reflect end user delivered prices.
 - Additional 1-month trend percentages have been included on each commodity reported.
