Commodity Trends:

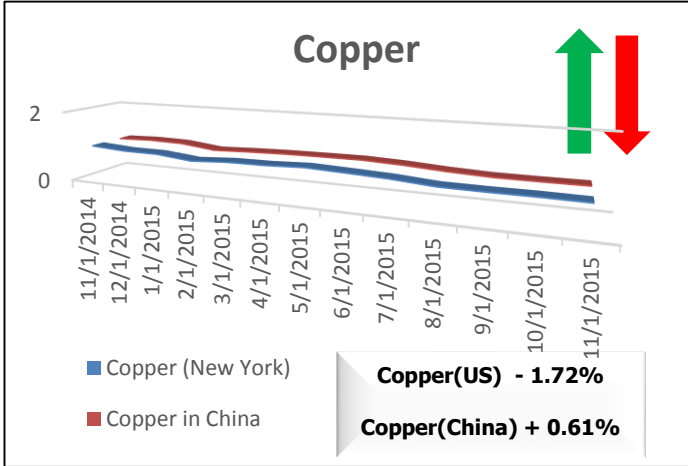

- The U.S. Bureau of Labor Statistics reported that total nonfarm payroll employment increased by 271,000 in October, which was the largest one-month jobs gain in all of 2015. The unemployment rate fell slightly to 5 percent. This announcement topped economists' consensus expectations, which had forecasted a modest gain of 180,000 jobs.
- The Commerce Department said Friday that retail sales rose a seasonally adjusted 0.1 percent last month, after being unchanged in September and August. Over the past 12 months, sales have risen 1.7 percent. Lower gasoline costs and meager inflation have downplayed the extent of consumer spending, as the retail sales report is not adjusted for price changes.
- The Institute for Supply Management's nonmanufacturing purchasing-managers index rose to 59.1 in October from 56.9 in September, a three-month high. The data provides a barometer for the nation's restaurants, builders, bankers and other service providers. Consumer spending is the primary driver of the economic expansion in the U.S., and two-thirds of those outlays are on services. The service sector has expanded for 69 straight months.
- Autodata Corp. reported that the car sales rose by a double-digit percentage in October, driven by the month having five weekends and continued strong demand for larger vehicles amid low oil prices. WardsAuto is calling for U.S. light vehicle sales to reach a 17.5 million-unit seasonally adjusted annual rate, higher than the 17.2 million recorded year-to-date through September and an 11-year peak for the month.
- The graphs below represent a one year price trend for comparison only and do not reflect end user delivered prices.
- Additional 1-month trend percentages have been included on each commodity reported.
