

Lusterlume #1

Lusterlume 1 is a liquid, mildly alkaline and phosphate free burnishing compound for: steels, aluminum alloys and zinc die-castings.

Lusterlume 1 is ideal for burnishing aluminum alloys because it produces a final lustrous finish.

Features & Benefits

- Mildly alkaline - (pH approximately 8.5) rather safe to use.
- Dissolves quickly and completely in water to form a stable solution.
- Rinses off readily from work, leaving a glistening clean surface with the right color.
- Excellent wetting and lubricating properties.
- Produces moderate foam to cushion work in process.
- Can be used in most conventional types of tumbling equipment, including open tilt or horizontal barrels, with or without media.

Operating Conditions

NOTE: ALL WORK MUST BE PRECLEANED PRIOR TO PROCESSING IN Lusterlume 1.

Aluminum alloys should also be processed through a deoxidizer-desmutter prior to processing in Lusterlume 1. The purpose of the deoxidizer-desmutter is to remove the natural oxide film from the aluminum surface. Omitting this step would result in a dark colored surface rather than a white color.

Concentrations	1 to 2 fluid oz. of Lusterlume 1 per gallon of water. The solution level in the barrel should be approximately 1 to 2 inches above the load level.
Time	burnishing time may vary from 30 minutes to 6 hours or more, depending on type of part and finish required.
Media	parts may be self tumbled or used with various type of steel media.
Barrels	wood or rubber lined are preferred for high color burnishing, however, Lusterlume 1 can be used in barrels.

Waste Disposal

Discharge to disposal unit. In order to be completely informed on the latest regulations for your area, please contact the local authorities.

Caution

Discharge to disposal unit. In order to be completely informed on the latest regulations for your area, please contact the local authorities.
