

# Additive CN-100

## ***Treatment Additive, Nitrogen-Calcium***

Calcium-Nitrogen rich additive for use in chemical processing bath applications. Can be used to modify crystal size, regulate coating weights and grain refinement in process baths where needed. Typically used very sparingly (small additives) directly into the processing baths or concentrate feeding systems as an additive.

CN-100 can be used in zinc phosphate baths to lower coating weights in heavy coating processing baths and to replenish calcium in all types of zinc phosphate processes.

Zinc phosphate RB-048 is an example of a calcium rich bath that could be modified with additional calcium if needed.
