

# AquaPure™ Quick Drop 80

Aquapure Quick Drop 80 is a proprietary blend of clay minerals, polymer and pH adjusting agents which allow entrapment or encapsulation of emulsified oils and dissolved metals from various wastewater streams. This one-step system offers a simple alternative to multiple tank treatments while ensuring that the treated effluent will meet POTW discharge limits established by local and state authorities. Aquapure Quick Drop 80 captures solids and masses them together to quickly settle suspended particulate. The use of this product requires vigorous mixing.

## Features & Benefits

Proprietary blend of clay minerals	One step coagulation and flocculation for a variety of wastewater streams
Dry granular mix	Long shelf life, anti-caking
Easy to use	Quickly binds oil, grease & metals for precipitation, aids in clarification

## Typical Applications

- Works well on tubbing wastewater to drop suspended particulate
- Parts washer cleaners
- Vibratory deburring wastewater
- Mop and scrubber wastewater
- Paint and ink waters
- Dye penetrants bearing waters
- Adhesive wash wastewaters

## Operating Conditions

Dosing should be determined by jar testing on a 250 mL wastewater sample. A beginning dose for a 250 mL jar test is typically 0.5 g per 250 mL with high speed mixing. This can be increased in increments of 0.5 g until the desired clarity is obtained. The higher the solids the higher the dose. Dosing per gallon can be ½ oz to 4 oz per gallon of wastewater.
