

Aqastrip™ 105

Aqastrip 105 is an acidic liquid concentrate, which is used to replenish the depleted acid components of Aqastrip ACB working baths.

Features & Benefits

Lowers bath pH	Extends bath-life
Can be used as a liquid concentrate	Reduces export cost

Typical Applications

- Replenishes acid components of an Aqastrip ACB working bath.

Operating Conditions

Concentration	Determined by titration
Agitation	Recommended

Titration Method

1. Pipette 2 mL of bath sample into a 250 mL Erlenmeyer flask.
2. Add 75 to 100 mL of DI water to the flask.
3. Add 5 to 10 drops of Phenolphthalein indicator and mix well.
4. Titrate with 0.1 N Sodium Hydroxide to a pink endpoint.
5. Record mL used.

Calculation

$$\text{Aqastrip ACB Acid Strength Percentage} = (\text{mL } 0.1 \text{ N NaOH} / 18.0) \times 100$$

Note – If a pH meter is available, it is preferable to titrate the sample to a pH endpoint of 8.3, because dark paints can cause problems seeing a phenolphthalein endpoint.

Use the formula below to calculate the amount of Aqastrip 105 required to replenish the Aqastrip ACB working bath.

Calculation

$$[(100 - \text{Aqastrip ACB Acid Strength Percentage}) \times 0.387] / 100 \times \text{Tank Volume}$$

WARRANTY: THE QUALITY OF THIS PRODUCT IS GUARANTEED ON SHIPMENT FROM OUR PLANT. IF THE USE RECOMMENDATIONS ARE FOLLOWED, DESIRED RESULTS WILL BE OBTAINED. SINCE THE USE OF OUR PRODUCTS IS BEYOND OUR CONTROL, NO GUARANTEE EXPRESSED OR IMPLIED IS MADE AS TO THE EFFECTS OF SUCH USE, OR THE RESULTS TO BE OBTAINED.
